| Contents | i |
| Nomenclature | ix |
| Preface | xiii |
| I Elementary Course | xv |
| 1 Introduction | 1 |
| 2 Heat and mass transfer | 3 |
| 2.1 Heat transfer | 4 |
| 2.2 Mass transfer | 4 |
| 2.3 Energy and mass conservation | 5 |
| 3 Heat | 11 |
| 3.1 Superposition principle | 13 |
| 3.2 Heat conduction, one-dimensional cases | 15 |
| 3.2.1 Steady-state heat conduction in single and multi-layered structures | 16 |
| 3.2.2 Plane radial heat flow at steady-state | 20 |
| 3.2.3 Response to temperature variations - Step-changes | 22 |
| 3.2.4 Contact temperature between two layers | 24 |
| 3.2.5 Response to periodic temperature variations | 26 |
| 3.3 Network analysis | 29 |
| 3.4 Heat conduction in 2D and 3D | 33 |
| 3.4.1 Thermal bridges | 34 |
| 3.4.2 Heat loss to the ground | 37 |

CONTENTS

| | | |
|----------|---|-----------|
| 3.5 | Convection | 42 |
| 3.5.1 | Surfaces to air | 43 |
| 3.5.2 | Non-ventilated air gap | 44 |
| 3.6 | Radiation | 46 |
| 3.6.1 | Solar radiation, (Short wave) | 48 |
| 3.6.2 | Long wave radiation | 48 |
| 3.6.3 | Long wave radiation exchange between two isothermal surfaces in an enclosure | 51 |
| 3.7 | Combined heat transfer | 53 |
| 3.7.1 | Energy balances for a surface - Equivalent temperature | 53 |
| 3.7.2 | Heat transfer through a layered wall structure, U-values | 57 |
| 3.7.3 | Non-ventilated air gap | 58 |
| 3.7.4 | Air channel | 59 |
| 3.7.5 | Porous insulation materials | 60 |
| 3.7.6 | Convection in porous insulation materials | 62 |
| 3.8 | Energy balances for ventilated spaces | 64 |
| 3.8.1 | Room with well mixed air, periodical varying conditions | 66 |
| 3.8.2 | Room with well mixed air and no heating | 69 |
| 4 | Air | 71 |
| 4.1 | Driving forces | 71 |
| 4.1.1 | Wind pressure | 71 |
| 4.1.2 | Stack effect | 75 |
| 4.1.3 | Mechanical ventilation | 76 |
| 4.1.4 | Combining wind, stack and fan pressures | 77 |
| 4.2 | Air transfer through the building envelope | 77 |
| 4.2.1 | Permeable materials | 78 |
| 4.2.2 | Air gaps | 78 |
| 4.2.3 | Holes in thin air tight layers | 81 |
| 4.2.4 | Position of the neutral pressure plane | 82 |
| 4.3 | Ventilation of a building | 83 |
| 4.3.1 | Air exchange rate | 83 |
| 4.3.2 | Air-tightness | 84 |
| 4.3.3 | Heat losses due to transmission and ventilation | 84 |

| | | |
|-----------|---|------------|
| 5 | Moisture | 87 |
| 5.1 | Moisture sources | 87 |
| 5.2 | Moisture in air | 88 |
| 5.3 | Moisture in porous materials | 90 |
| 5.4 | Moisture transfer in air or by air | 92 |
| 5.4.1 | Diffusion | 92 |
| 5.4.2 | Convection | 93 |
| 5.5 | Moisture transfer in porous material | 96 |
| 5.5.1 | Diffusion | 96 |
| 5.5.2 | Capillary suction | 99 |
| 5.5.3 | Combined diffusion and capillary suction | 102 |
| 5.6 | Transfer of liquid water due to pressure difference | 105 |
| 5.6.1 | Permeable material layer | 105 |
| 5.6.2 | A hole in a water tight layer | 105 |
| 5.7 | Moisture to and from a surface | 106 |
| 5.7.1 | Convection | 106 |
| 5.7.2 | Surface condensation and evaporation | 107 |
| 5.8 | Drying of a layer | 107 |
| 5.9 | Moisture balance for two building components | 110 |
| 5.10 | Moisture balance for ventilated spaces | 112 |
| 5.10.1 | Transient change due to a moisture source | 112 |
| 5.10.2 | Steady-state condition, wet surface and surface condensation | 113 |
| 5.11 | Interstitial condensation | 116 |
| | Exercises | 119 |
| | Answers to exercises | 139 |
| II | Advanced Course | 143 |
| 6 | Balance equations | 145 |
| 6.1 | Conservation equations | 146 |
| 6.2 | Heat capacity | 148 |
| 6.3 | Moisture capacity | 150 |
| 6.4 | Vector properties of heat and mass flow | 154 |
| 6.5 | The divergence operator | 156 |

CONTENTS

| | |
|--|------------|
| <i>Heat and air transfer</i> | 159 |
| 7 Transfer equations | 161 |
| 7.1 Heat and mass flow in materials | 161 |
| 7.1.1 Heat conduction | 161 |
| 7.1.2 Air flow due to external pressure difference . . . | 162 |
| 7.1.3 Convective flows of heat | 164 |
| 7.1.4 Combined convection and conduction | 165 |
| 7.2 Partial differential equations | 165 |
| 7.2.1 Heat conduction | 165 |
| 7.2.2 Air flow due to external pressure difference . . . | 165 |
| 7.2.3 Combined convection and conduction | 166 |
| 7.3 Initial conditions | 167 |
| 7.4 Boundary conditions | 167 |
| 7.4.1 Heat conduction | 167 |
| 7.4.2 Air | 168 |
| 7.5 Superposition principles | 168 |
| 7.6 Periodic complex solutions-Equations | 172 |
| 7.7 Numerical solution technique | 174 |
| 7.7.1 Mesh | 175 |
| 7.7.2 Energy balance for a rectangular cell | 176 |
| 7.7.3 Algorithm for the numerical simulation | 176 |
| 7.7.4 Calculation of the heat flow, two-dimensional case | 177 |
| 7.7.5 Calculation of the heat flow, one-dimensional case | 178 |
| 7.7.6 Boundary conditions | 178 |
| 7.7.7 Stable time step | 179 |
| 8 Steady-state problems | 181 |
| 8.1 Varying thermal conductivity | 181 |
| 8.2 Heat source | 182 |
| 8.3 Transverse heat loss | 183 |
| 8.4 Air channel with transverse heat flow | 185 |
| 8.5 Air and heat flow through layers | 187 |
| 8.5.1 A layer with constant thermal conductivity . . . | 187 |
| 8.5.2 Layer with varying thermal conductivity | 189 |
| 8.6 Thermally insulated slab on ground | 190 |
| 8.6.1 3D-problems with a insulated rectangle | 190 |
| 8.6.2 Long insulated strip | 191 |

| | | |
|-----------|---|------------|
| 9 | Transient problems | 195 |
| 9.1 | Infinite region | 195 |
| 9.1.1 | Thermal decline, region with a higher initial temperature | 196 |
| 9.1.2 | Thermal decline due to a plane point source | 197 |
| 9.2 | Step response for semi-infinite slab | 198 |
| 9.2.1 | Zero surface resistance | 199 |
| 9.2.2 | Surface resistance | 200 |
| 9.2.3 | Constant heat flux | 202 |
| 9.2.4 | Linearly increasing boundary temperature | 202 |
| 9.3 | Slab | 202 |
| 9.3.1 | Temperature decline, no surface resistance | 203 |
| 9.3.2 | Temperature decline, surface resistance | 205 |
| 9.3.3 | Step response from one side, no surface resistance | 207 |
| 9.4 | Step response for a cylinder | 209 |
| 9.5 | Corner | 211 |
| 9.6 | Step response-Slab on ground | 211 |
| 9.7 | Periodic solutions for semi-infinite region | 214 |
| 9.7.1 | No surface resistance | 214 |
| 9.7.2 | With surface resistance | 215 |
| 9.8 | Periodic solutions for homogeneous slab | 216 |
| 9.9 | Periodic solutions - Slab on ground | 217 |
| 10 | Lumped system analysis | 221 |
| 10.1 | Step change in ambient temperature | 222 |
| 10.2 | Arbitrary ambient temperature | 225 |
| 10.3 | Periodic solution | 226 |
| 11 | Long wave radiation exchange | 229 |
| 11.1 | Gray and diffuse radiation | 229 |
| 11.2 | View factors | 230 |
| 11.2.1 | Definitions | 230 |
| 11.2.2 | Rules | 232 |
| 11.2.3 | Cross-string method | 234 |
| 11.2.4 | View factors for some cases | 235 |
| 11.3 | Blackbody radiation exchange | 241 |
| 11.4 | Radiation exchange in an enclosure | 242 |
| 11.4.1 | Balance for the surface | 242 |
| 11.4.2 | Two-surfaces enclosure | 244 |

CONTENTS

| | |
|--|------------|
| 12 Network components | 249 |
| 12.1 Heat conduction through slabs | 249 |
| 12.1.1 Steady-state | 250 |
| 12.1.2 Periodic | 250 |
| 12.2 Heat transfer to the ground | 252 |
| 12.2.1 Steady-state | 252 |
| 12.2.2 Periodic one-dimensional heat flow | 252 |
| 12.3 Convective heat transfer | 254 |
| 12.3.1 Surface heat transfer | 254 |
| 12.3.2 Ventilation | 255 |
| 12.4 Heat sources | 256 |
| 12.5 Lumped systems | 257 |
| 12.6 Radiation exchange | 258 |
| 12.6.1 Surface | 258 |
| 12.6.2 Coupling between surfaces | 258 |
| 12.7 Δ - to Y -network couplings | 258 |
| 12.7.1 Reduction from Δ - to Y -network | 258 |
| 12.7.2 Reduction from Y - to Δ -network | 259 |
| | |
| 13 Examples of energy balance problems | 261 |
| 13.1 Steady-state attic temperature | 261 |
| 13.2 Energy balance-dynamic insulation | 269 |
| 13.3 Operative temperature | 273 |
| 13.4 Wall | 275 |
| 13.5 Garage | 279 |
| 13.6 Ventilated room | 281 |
| | |
| <i>Moisture transfer</i> | 285 |
| | |
| 14 Transfer Mechanisms | 287 |
| 14.1 Conditions in the pore system | 287 |
| 14.2 Vapor transport mechanisms | 292 |
| 14.3 Liquid transport mechanisms | 293 |
| 14.4 Isothermal moisture transfer | 293 |
| 14.4.1 Fick's law | 294 |
| 14.4.2 Kirchhoff potential | 296 |
| 14.4.3 Combined vapor and liquid transport | 297 |
| 14.5 Non-Isothermal moisture transfer | 299 |
| 14.5.1 General moisture flow equation | 299 |

CONTENTS

| | |
|---|------------|
| 14.5.2 Combined vapor and liquid flow | 300 |
| 14.5.3 Other potentials | 300 |
| 14.6 Partial differential equation | 301 |
| 14.6.1 General equations, no air flow | 301 |
| 14.6.2 Isothermal condition-Kirchoff potential | 302 |
| 14.6.3 Isothermal - linearized, one-dimensional | 302 |
| 14.7 Initial conditions | 303 |
| 14.8 Boundary conditions | 303 |
| 14.8.1 Surface facing the air | 303 |
| 14.8.2 Interface between different material | 305 |
| | |
| 15 Steady-state problems | 309 |
| 15.1 Layer with surface resistance | 309 |
| 15.2 Diffusion versus capillary suction | 310 |
| 15.3 Roof with moisture tight top surface | 312 |
| 15.4 Air channel with transverse moisture flow | 314 |
| | |
| 16 Transient problems | 317 |
| 16.1 Periodically varying humidity at boundary | 317 |
| 16.2 Drying out of a layer | 318 |
| 16.3 Moisture uptake from a water surface | 320 |
| 16.4 Vapor exchange with walls - Step response | 321 |
| 16.4.1 Step response in the boundary humidity | 321 |
| 16.4.2 Balance for a ventilated room | 324 |
| 16.5 Vapor exchange with walls - Periodic case | 325 |
| 16.5.1 Periodic variations in the boundary humidity . . | 325 |
| 16.5.2 Balance for a ventilated room | 326 |
| | |
| Derivations | 331 |
| | |
| Exercises | 349 |
| | |
| Answers to exercises | 369 |
| | |
| Swedish-English dictionary | 373 |
| | |
| References and literature | 375 |

CONTENTS

| | | |
|----------|---|------------|
| A | Important functions | 381 |
| A.1 | Error functions | 381 |
| A.2 | Bessel function | 387 |
| A.3 | Hyperbolic functions | 388 |
| A.4 | Transcendental equations with tangent | 389 |
| A.5 | Transcendental equations with Bessel functions | 390 |
| A.6 | Functions for periodic problems | 391 |
| B | Complex analysis | 397 |
| C | Vector analysis | 399 |
| C.1 | The gradient operator | 399 |
| C.2 | Nabla operator calculation rules | 400 |
| C.3 | Temperature gradient | 401 |
| C.4 | Laplace operator in different coordinate systems | 401 |
| D | Humidity by volume at saturation | 403 |
| E | Material data | 405 |
| E.1 | Thermal data | 405 |
| E.2 | Properties of air | 408 |
| E.3 | Moisture properties | 410 |
| | Index | 417 |
